Subject: Tobin School Soil & Air Contamination and Remediation Timeline – Freedom Baird, Media Consultant

Many significant concerns have been raised regarding the project to replace the current school. Concerns about the increased number of kids and staff, the loss of open space and increased traffic have received much attention.

However, The serious health risks of hazardous materials known to be there have not gotten the attention and discussion as the issues listed above. I live directly opposite the school. Neighbors directly adjacent to me have 6 young kids who play outside. The huge amount of waste and dust spewed into the air during the 5 years of sewer separation project is not acceptable. The Neighbors of Tobin need to know what precautions will be taken and given an honest assessment of the risks.
