CAMBRIDGE NEIGHBORHOOD DEMOGRAPHIC PROFILE

TABLE OF CONTENTS

1. Introduction	1
2. Map of Cambridge Neighborhoods	1
3. Population and Housing Density: 1980 - 2000.....	2
4. Population by Age: 1980 - 2000.....	3
5. Racial Composition of Neighborhoods: 1980 - 2000.....	7
6. Persons Per Household: 1980 - 2000	11
7. Persons Residing in Group Quarters: 1980 - 2000	12
8. Family and Non-Family Households: 1980 - 2000	13
9. Families including Families with Children: 1980 - 2000	15
10. Place of Birth and Persons Speaking Language other than English at Home: 1980 - 2000.....	19
11. Place of Residence 5 Years Prior to Census: 1980 - 2000.....	21
12. Persons Attending School: 1980 - 2000.....	23
13. Educational Attainment: 1980 - 2000	25
14. Median Household Income: 1979 - 1999	28
15. Median Family Income: 1979 - 1999.....	29
16. Persons in Poverty	30
17. Poverty Status for all Families and for Female Headed Households: 1980 - 2000.....	31
18. Civilian Labor Force Membership and Unemployment: 1980 - 2000	33
19. Tenure of Housing Units: 1980 - 2000	37
20. Median Gross Rent: 1980 - 2000	39

INTRODUCTION

The tables included in this document provide several key indicators of neighborhood change over the past two decades.

Data Sources

The data in the tables derives from U. S. Census Bureau as follows:

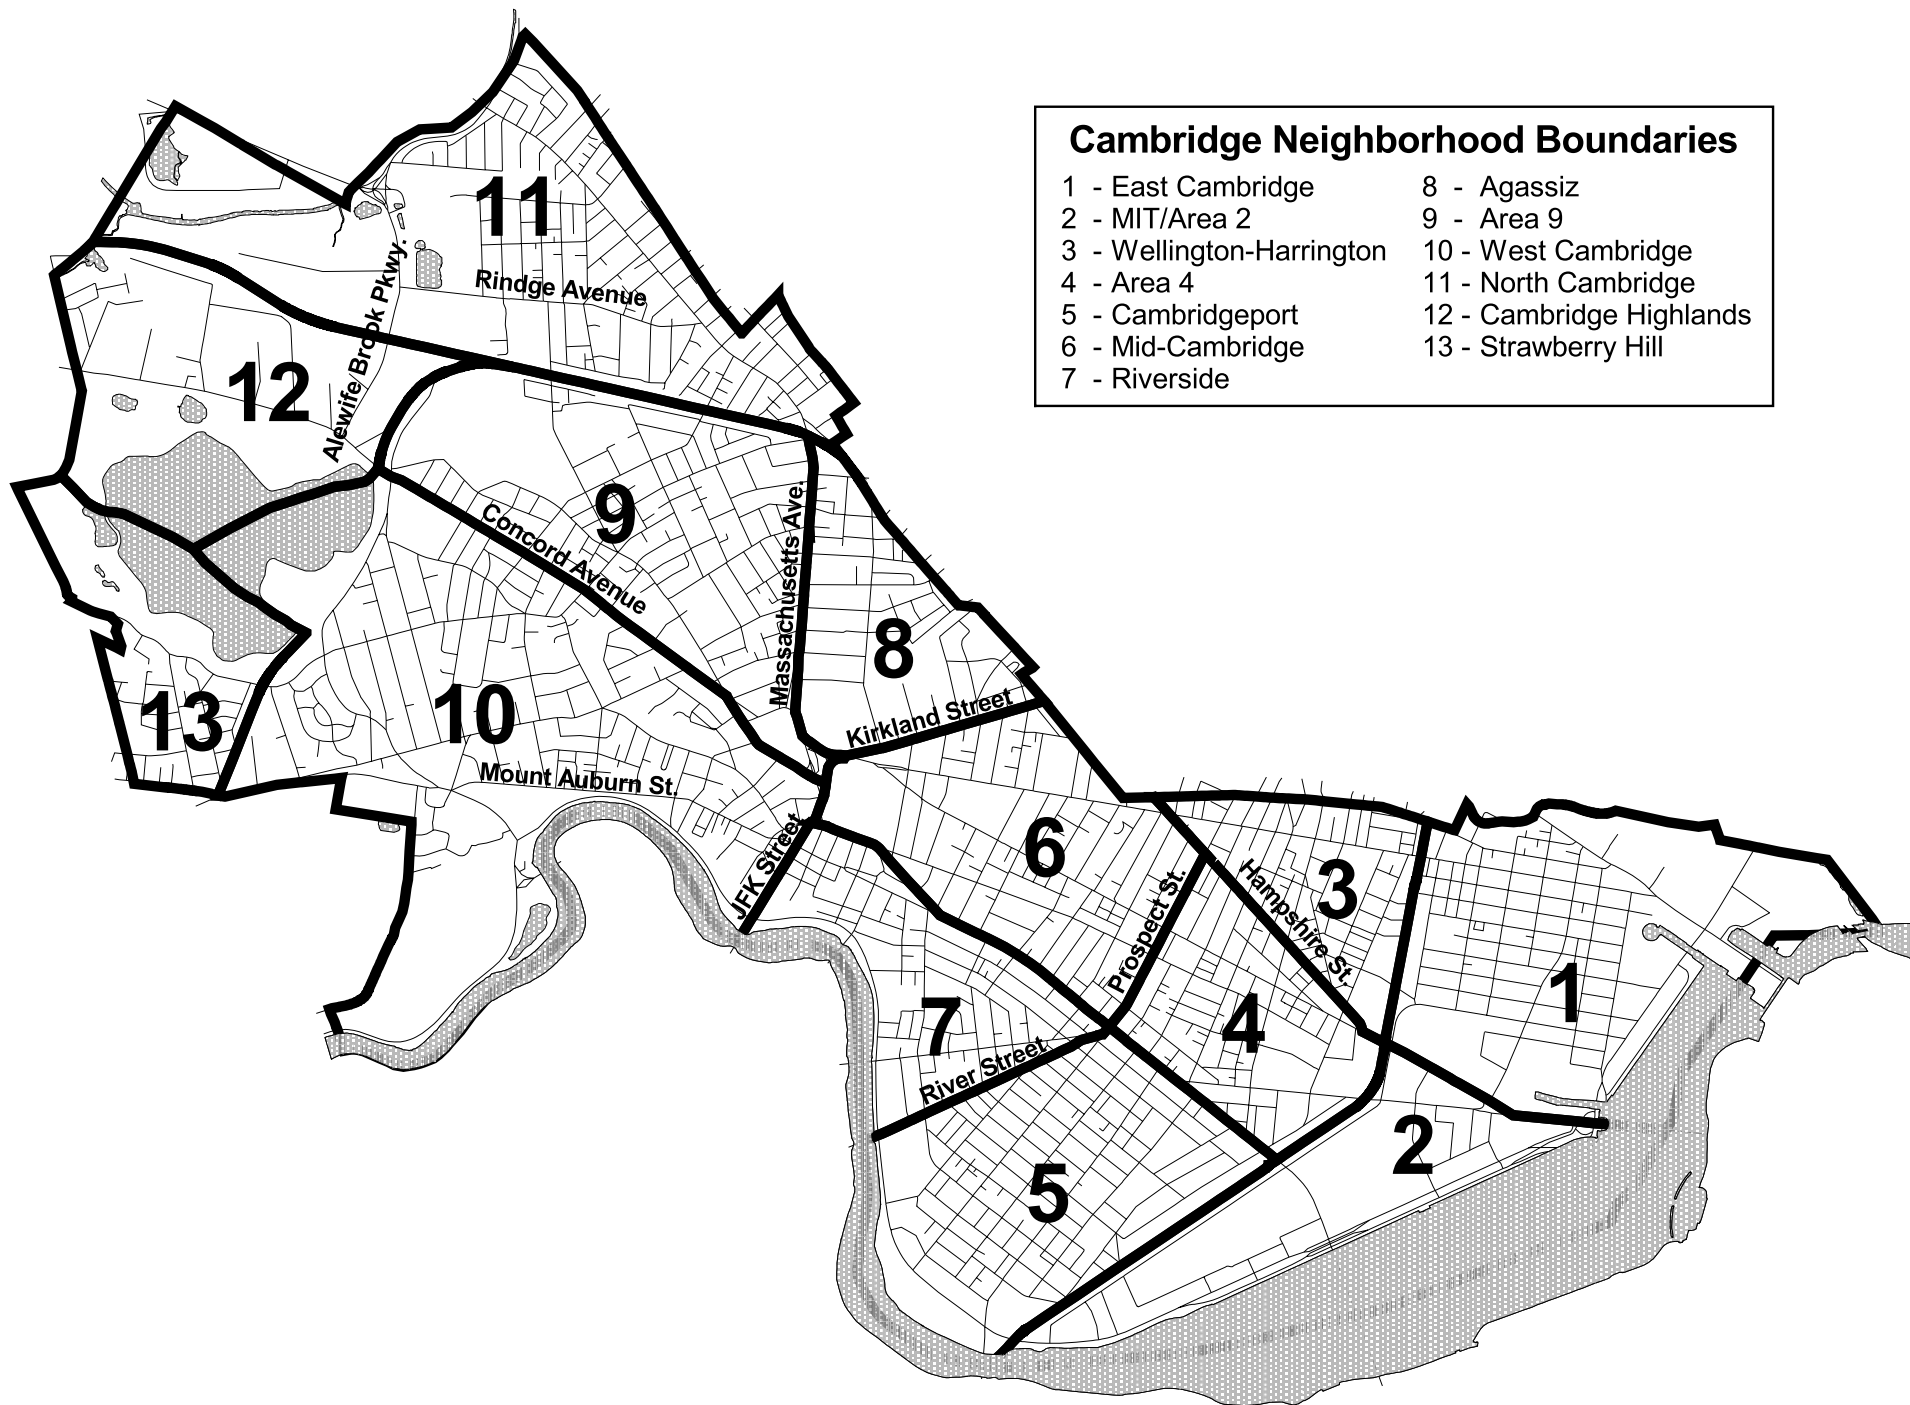

- *1980 data* from the Neighborhood Census Program
- *1990 data* from the User Defined Areas Program
- *2000 data* from either the SF1 data file compiled from the results of the Census short form or from a Special Tabulation compiled for the Community Development Department.

User Notes

The neighborhood census tables provided here should be used with the following precautions:

- *Variations in Information:* The figures found in the tables may differ from other information available from the US Census, the Community Development Department or other sources. This disparity arises from sampling variability between the US Census Long Form and Short Form survey instruments. The US Census used the Long Form instrument to collect the data used in the neighborhood census tables. The Long Form does not produce a true census, since it is mailed to one in six households. The US Census Bureau extrapolates Long Form data to apply it to the entire population. On the other hand, the Short Form instrument is mailed to all households and collects some of the same data as the Long Form from the entire population (e. g., population, age, race, etc.). Where information is available from both forms, the Short Form is regarded as the more accurate source. In other words, where a conflict occurs between data from the two forms, the US Census Bureau recommends the use of "100% count" data.
- *Rounding Error:* Much of the 2000 neighborhood level information was computed by using ratios drawn from a Special Census Tabulation compiled for the Community Development Department by the Census Bureau. As a result, in certain instances subcategory figures do not sum to the neighborhood total. In addition, neighborhood totals may fail to sum to the 2000 citywide figures, which are drawn directly from the SF3 data file for the City of Cambridge.
- *Boundary Adjustments:* Comparisons of 1980, 1990 and 2000 information is complicated by changes in US Census boundaries, Census Bureau data suppression policies and data compilation errors. All statistical tables reflect the following adjustments:

- If necessary, the US Census Bureau will suppress data to protect individual privacy in areas whose population falls below a certain threshold. In accordance with this policy, in 1980 Cambridge Highlands expanded to include a portion of Area 9. This measure affected the blocks bounded by Bellis Circle, Walden Street, Garden Street, Field Street, Bay State Road and the Fitchburg Division railroad tracks. In 1990 data from this area was restored to Neighborhood 9.
- Changes to US Census Bureau technology for the 1990 Census required minor boundary adjustments between several neighborhoods. Small portions of blocks shifted between Cambridgeport (Area 5) and Riverside (Area 7), between Mid-Cambridge (Area 6) and Agassiz (Area 8), and between West Cambridge (Area 10) and Strawberry Hill (Area 13).
- In 1980 and 1990 Census Block boundaries did not allow for an accurate compilation of data for residents of Strawberry Hill (Area 13) living in homes east of Holworthy Street, Holworthy Place and Park Avenue and west of the Watertown Branch train tracks. Persons residing in this area were counted as residents of West Cambridge (Area 10). The 2000 Census counts these persons as residents of Strawberry Hill.
- In compiling results for the 2000 Census, the Census Bureau erroneously assigned the residents of Harvard University dormitories located in Harvard Yard and along Harvard Street east of Quincy Square, all of which fall in the Mid-Cambridge neighborhood, to a block located south of Massachusetts Avenue in the Riverside neighborhood. To compensate for this error, all residents of the block located south of Massachusetts Avenue are allocated to Mid-Cambridge for the purpose of calculating neighborhood statistics. The great majority of the persons affected are group quarters residents residing in Harvard University dormitories.
- The single census block surrounded by Huron Avenue, Grove Street, Blanchard Road, Concord Avenue and Fresh Pond Parkway, including Fresh Pond Reservation, falls partially in West Cambridge (Area 10), Cambridge Highlands (Area 12) and Strawberry Hill (Area 13). The Area 10 portion is unpopulated. To accommodate census block boundaries, the Area 12 portion is included in the Strawberry Hill figures for all three years analyzed.

1. The figures for the 2000 Census combine the results of the "Asian" and "Native Hawaiian & Other Pacific Islander" categories. Prior to 2000, these two groups were combined into a single category "Asians & Pacific Islanders".
2. The category "Other Race" indicates that the respondent wrote in a race category not included elsewhere by the Census Bureau. Prior to the 2000 Census, where persons were allowed to select two or more racial categories, persons of mixed racial heritage appear to have been more likely to select this category. Examples of persons assigned to the "Other Race" category by the 2000 Census includes those who recorded under the race category an Hispanic origin group, multiracial, mixed, Cajun, Cape Verdean or Creole.
3. Census 2000 was the first census to allow respondents to report more than one race for an individual. Due to this change in methodology, racial statistics reported from Census 2000 lack a one-to-one comparison with those reported by any previous Census.
4. Hispanic status is independent of race and reflects whether a respondent has origins in either Spain or the Spanish speaking countries of the western hemisphere. The latter include Mexico, Cuba and the Dominican Republic, as well as all Spanish speaking countries located in Central America and South America.

1. The Census Bureau uses a set of income thresholds that vary by family size and composition to determine who is poor. The poverty thresholds do not vary geographically. They are updated annually using the Consumer Price Index to reflect the effects of inflation. The official poverty definition counts money income before taxes and does not include capital gains and noncash benefits. Poverty is not defined for people living in college dormitories, institutional group quarters such as nursing homes and jails, or for unrelated individuals under age 15. In 1999 the poverty threshold for a three person household comprised of one adult and two children under 18 was \$13,423.
