Subject: Tobin School rehab -- soil removal

I am concerned about the process of testing of the soil for contamination and the removal of such.

I would like to know if this is a designated toxic waste site. What were the prior uses of this land which might cause soil or land water contamination?

I know that the site of the storage facility kitty corner across Concord Ave. is a toxic waste site, and I have a report of the contaminants in ground water there. I believe it was a manufacturing site.

I am very concerned that the process of soil testing and removal not cause undue toxicity. I have a chronic progressive pulmonary condition, and need to know how unsafe this process could be for me.

I brought this up in the last meeting and was given a non-answer.
