**FILE NO. 11704 Water Meters, Registers, and Other Hardware;  
SUBMIT INVITATION FOR BID PRIOR TO: 11:00 a.m. on Thursday, August 1, 2024.**

**Scope of Services**

The City will be implementing an on-going meter replacement project during the term of the Meter Bid contract period. Meter replacement work will be completed by Cambridge Water Department Staff, and if required, by outside contractors. By submitting a meter supply Bid, the meter vendor is stating they will work jointly and cohesively with City or Contractor forces and support both delivery and product performance issues for these meters. All meter deliveries are expected to be directed to the **Cambridge Water Department Receiving Area at the rear of the Walter J. Sullivan Treatment Plant, located at 250 Fresh Pond Parkway, Cambridge, Massachusetts, 02138.**

The City will provide no guarantee level of purchase quantities during this term. All ordered products will require delivery within thirty (30) days from date of order placement unless otherwise granted an allowance by the City. The City will not be charged for delivery of materials. Failure to meet these delivery requirements will permit the City to acquire meter products from other meter supply vendors. This stipulation shall not apply to shipments delayed due to Acts of God, strikes, security protocols, or other matters beyond vendor control. All meters are to be delivery complete with any nuts, bolts, gaskets, spools, spacers, fittings, or attachments as indicated in these specifications.

It is the intention of these specifications to obtain water meters complete with an electronic register that meet the latest revision of the American Water Works Association (AWWA) standards C700, C701, C702, C707, and C712. With the exception of the Electronic (Magnetic Flow) Type Cold Water Meters, all other meters shall be equipped with an absolute encoder type meter register. The meter and register shall be capable of directly interfacing with the STAR Aclara fixed radio frequency (RF) AMR System, without need for any on-site register programming. In addition, the meter registers shall be designed as three (3) - wire mode AMR compatible registers requiring **no** need for installation of (by CWD or designated Contractor Personnel) any intermediary devices or meter interfacing units (MIU), etc. necessary to communicate meter register readings through to the devices constituting the AMR System network, and as well, the meter registers shall be required to have been compatible with STAR for at least two (2) years prior to award of the bid. All water meter registers shall read in **cubic feet only** with no exception.

**Meter Register Accuracy** – The CWD “interrogates” each encoder-type water meter at each respective account four (4) times a day in order to view incremental water usage (digital or numeric readouts of cubic footage used at each water billing account) via the STAR Aclara AMR system, and the CWD requires a high level of accuracy from each and every meter register to assure proper billing for each respective CWD water billing account. Therefore, the CWD is specifying the following range of values for errant reads from *each and every water meter register*:

**Maximum Error Rate** – one (1) errant water usage read per two-thousand (2,000) meter reads as reported through the STAR Aclara AMR system. In other words, **no more than** 1 read error per 2,000 reads shall be allowed, and this is as well equivalent to an accuracy rate of 99.95% in reporting *correct* water usage reads. Please note: an errant read, as defined herein, is an incorrect meter read reported through the STAR Aclara AMR system as either a “phantom read” displaying incorrect digits (numeric), or as an errant read displaying non-numeric characters.

**Minimum Error Rate** – three point four (3.4) errant water usage reads per one-million (1,000,000) meter reads as reported through the STAR Aclara AMR system. Please note: 3.4 errant reads per 1,000,000, also known in general industry as **six sigma accuracy**, and equivalent to a 99.99966% accuracy rate in making *correct* reads, is viewed by the CWD as an ideal error rate with regards to the ability for each meter register to properly and accurately display water used at each at each respective account via “interrogation” by the STAR Aclara AMR system.

**FILE NO. 11704 Water Meters, Registers, and Other Hardware;  
SUBMIT INVITATION FOR BID PRIOR TO: 11:00 a.m. on Thursday, August 1, 2024.**

Although six sigma accuracy is preferred, the CWD is requiring that each meter vendor shall at least meet the "Maximum Error Rate" criteria as mentioned above. As well, the CWD shall require written documentation (QA/QC reports, letters of Certification, etc.) from each water meter vendor of their ability to *meet or exceed* the encoder-type register accuracy in reporting water usage at each billing account as described herein, and this written documentation shall be submitted as an attachment to each respective water meter vendor's bid submission.

**Please note:** With regards to the question of encoder-type register accuracy or ability to display proper water usage reads via the AMR system, this section is not making any reference to other types of material defects pertaining to each respective water meter. In other words, mechanical defects within each respective encoder-type register, other than those that may cause errant reads via the STAR Aclara AMR system, are not to be construed as included in the Maximum and Minimum Error Rate Range as specified above.

All meters and parts required for their installation shall be tested and in compliance with the requirements of the latest revision of the AWWA Standards C700, C701, C702, C707, and C712.

Water meters and required attachment parts in contact with potable water shall be fabricated from City of Cambridge approved **no lead/ultra low lead material** containing residual lead levels that **shall not exceed a maximum of 0.25% by weight**. Moreover, said meter and attachment parts in contact with drinking water supply shall be certified as suitable for contact with potable water in compliance with **ANSI/NSF Standard 61, Drinking Water System Components – Health Effects**. Meter parts not in contact with potable water shall comply with the requirements of ASTM B 62 and ASTM B 584 Copper Alloy Number C83600 or C84400 respectively.

Meters shall be guaranteed against defects in materials and workmanship for a period of one year from date of installation. In addition, unless otherwise stated herein, all meter registers shall be warranted for 15 years from the date of installation. A full copy of the meter and register warranty shall be provided with Bid submittal. Defective parts will be replaced without charge to the city. The limit of guarantee for water meters and component parts shall be as indicated by the manufacturer.

The meters and component manufacturers must submit an affidavit confirming that the items to be supplied meet all the requirements specified herein.

**Rejected Meters**

The meter vendor shall at his own expense replace all rejected meters. All meters shall be properly boxed to protect them against damage in shipment. Meters shall be rejected by the City when damages to the container indicate the possibility of damage to the meter. The City will not accept invoices until inspection and testing of the meters are satisfactory to the Department.

<u>Sizes</u>	<u>Connections</u>
5/8-inch x 3/4-inch	Screw End with Rubber Washers
3/4-inch	Screw End with Rubber Washers
1-inch	Screw End with Rubber Washers
1 1/2-inch	Bronze Flanges with Rubber Washers
2-inch	Bronze Flanges with Rubber Washers

Length

Meter must conform to AWWA Standard C-700 as most recently revised.

Cases

All meters shall have a no-lead or ultra low-lead (see General Requirements) outer case with a separate measuring chamber that can easily be removed from the case. All meters shall have cast on them, in raised characters, the size, model and direction of water flow through the meter. Cast Iron or Brass frost bottoms shall be provided on 5/8", 3/4", and 1" size meters. The manufacturer's serial number must be permanently affixed to the main case to aid in identification and must be visible so that it can be read from directly above the water meter. The Cambridge Water Department would prefer that the first two digits of the serial number be the year the meter was manufactured. All cases shall be guaranteed to be free from defects for twenty-five (25) years from date of shipment. Meters 1 1/2" and 2" size shall have two-bolt oval flanges, faced and drilled.

No threaded body meters are required. The City prefers all 1 1/2" or 2" meters have a minimum 1" test plug to permit future on-site testing without removing the meter. This is a preference, not a requirement. Meter vendors should advise the City of whether or not this feature is provided with 1 1/2" and 2" meters being bid under Section 1.

External Bolts and Washers

All external bolts and washers, etc. shall be of stainless steel or other corrosion resistant material as approved by the Cambridge Water Department and shall be easily removed from the main case.

Measuring Chambers

The measuring chamber shall be made of a copper alloy or a suitable synthetic polymer and shall not be cast as part of the main case. All piston or disc assemblies shall be interchangeable in all measuring chamber assemblies of the same size. The measuring chambers for all meters shall be carefully machined and secured in position in the outer casings so that any slight distortion of the casings which might occur when operating with a pressure less than 150 psi pressure will not affect the accuracy of the meters. The motion of the piston will be transmitted to the sealed register through the use of a magnetic coupling.

Strainers

All meters shall be equipped with a corrosion resistant strainer, with an effective straining area of at least twice the bore diameter, which can be easily removed from the meter without the meter itself being disconnected from the pipeline.

Change Gears

Change gears will not be allowed to calibrate the meter. All registers of a particular registration and meter size shall be identical and completely interchangeable.

Accuracy and Head Loss

Meters shall meet or exceed current AWWA C-700, current revision, test flows, head loss and accuracy standards. Bidders should note if the meters exceed C700. In addition, each encoder-type meter register head shall be able to measure cubic footage of water used within an accuracy range of **no more** than one (1) errant read per every two-thousand (2,000) meter reads (Maximum Error Rate = 99.95% correct reads) down to a Minimum Error Rate of three point four (3.4) errant reads per one-million (1,000,000) reads (=99.99966% correct reads, or **six sigma** accuracy) via the "interrogation" of each respective water meter at each respective water billing account by the STAR Aclara AMR system. Each water meter vendor shall supply written documentation as an attachment to their respective water meter bid submission verifying the ability of their encoder-type register to perform within this water usage reading accuracy range as specified. Please note: an errant read is defined as a misread reporting either an all digital (numeric) "phantom" read or a misread that displays non-numeric characters.

Pressure Capability

Meters shall operate up to a continuous working pressure of 150 pounds per square inch (psi), without leakage or damage to any parts. The accuracy shall not be affected when operating at this pressure due to possible distortion. Accuracy shall not be affected by variations in pressure up to 150 psi.

Register

Register must be permanent and hermetically sealed and firmly attached to meter case. A security seal must be provided to prevent easy removal and tampering. The register must be a direct read, absolute encoder type with wheel positioning reading technology (minimum six (6) encoder wheels) and be readily adaptable to the STAR Aclara fixed radio frequency (RF) AMR System, without need for any on-site register programming nor need for further installation of (by CWD or their designated Contractor Personnel) any intermediary devices to attach to the register to facilitate water meter reading transmissions to each respective meter transmitting unit (MTU).

The register shall be furnished with a test hand and/or a leak indicator and read in **cubic feet**. The size of the meter shall be marked permanently on the register dial face.

The register shall be warranted for 15 years from the date of installation. Any register that fails during this warranty period shall be replaced with a new register free of charge to the City.

Manufacturing

Meters shall be manufactured by a company that has manufactured water meters for at least ten (10) years and who manufactures all types and sizes indicated in Bid Section 1 of these specifications. The specific model being bid must have been in successful and continuous municipal service for at least two (2) years, and as well, the meter registers shall be required to have been compatible with the STAR Aclara AMR System for at least two (2) years prior to award of bid. The manufacturer shall provide a certificate showing that each meter has been tested for accuracy of registration and that it complies with the accuracy and capacity of AWWA C700.

All turbine meters shall be equipped with a separate or integrated Strainer that shall be attached to the upstream side of the meter. All turbine meters shall be equipped with a valved, in-line test provision, which will be no less than one- and one-half inch (1 1/2") for meters three inch (3") in size and two inch (2") in diameter for meter sizes four inch (4") through six inch (6"). Two one and one half-inch (2, 1.5") test ports may be used in place of a single two-inch (2") test port. The test spool requirement will not pertain to manufactured meters which have test ports incorporated into the meter body, however, even these meters will be required to have a valved connection from the test port to assist with line depressurization and on-site meter testing. No companion flanges are required.

The register must be a direct read, absolute encoder type with wheel positioning reading technology (minimum six (6) encoder wheels) and be readily adaptable to the STAR Aclara fixed radio frequency (RF) AMR System, without need for any on-site register programming nor need for installation of (by CWD or designated

The register shall be furnished with a test hand and/or a leak indicator and read in cubic feet. The size of the meter shall be marked permanently on the register dial face.

The register shall be warranted for 15 years from the date of installation. Any register that fails during this warranty period shall be replaced with a new register free of charge to the City.

Meter Identification

A unique serial number shall be stamped or embossed on each meter. The CWD would prefer that the first two digits of the serial number be the year the meter was manufactured.

Turbine Measuring Chamber

The turbine-measuring chamber shall be no lead or ultra low lead material or suitable synthetic polymer construction and shall be secured by stainless steel bolts or other nonferrous fasteners. The turbine chamber shall be positioned so that water must essentially travel in a straight-line path from the meter inlet to the meter outlet during high flow operation. The measuring cage shall be a self-contained unit attached to the cover for easy removal. The cage shall contain all the elements of the turbine, gear train and thrust bearings. The turbine shall be securely fastened to the shaft and have suitable thrust bearings both up and down stream or as determined by product design.

Registration

Meter registration shall accurately record not less than ninety eight and one half percent or more than one hundred one and one half percent (98.5% - 101.5%) of actual throughput at all normal test flows.

<u>Size</u>	<u>Normal Flow (gpm)</u>	<u>Minimum Limits Flow (gpm)*</u>
3”	8 - 350	6
4”	15 – 630	10
6”	30 - 1400	15

\* - Meter must register no less than 95% of actual throughput at this rate of flow.

Accuracy and Head Loss

Meters shall meet or exceed current AWWA C-701-02, current revision, test flows, head loss and accuracy standards. Bidders should note if the meters exceed C701-02. In addition, each encoder-type meter register head shall be able to measure cubic footage of water used within an accuracy range of **no more** than one (1) errant read per every two-thousand (2,000) meter reads (Maximum Error Rate = 99.95% correct reads) down to a Minimum Error Rate of three point four (3.4) errant reads per one-million (1,000,000) reads (=99.99966% correct reads, or **six sigma** accuracy) via the "interrogation" of each respective water meter at each respective water billing account by the STAR Aclara AMR system. Each water meter vendor shall supply written documentation as an attachment to their respective water meter bid submission verifying the ability of their encoder-type register to perform within this water usage reading accuracy range as specified. Please note: an errant read is defined as a misread reporting either an all digital (numeric) "phantom" read or a misread that displays non-numeric characters.

Pressure Test

Meters shall be guaranteed to operate successfully at a working pressure of 150 pounds per square inch, without leakage or damage to any component.

Meter Guarantee

Meters shall be guaranteed against defects in material and workmanship for a period of one year from the date of installation. A full copy of the meter and register warranty shall be provided with Bid submittal.

External Bolts

All external bolts, washer, hardware, etc., shall be of stainless steel or other corrosion resistant composition as approved by the City.

Manufacturing

Meters shall be manufactured by a company which has manufactured water meters for at least ten (10) years and who manufactures all types and size meters as indicated in Bid Section 2 of these specifications. The specific model being bid must have been in successful and continuous municipal service for at least two (2) years, and as well, the meter registers shall be required to have been compatible with the STAR Aclara fixed radio frequency (RF) AMR System for at least two (2) years prior to award of bid.

**City of Cambridge CORI Policy**

1. Where Criminal Offender Record Information (CORI) checks are part of a general background check for employment or volunteer work, the following practices and procedures will generally be followed.
2. CORI checks will only be conducted as authorized by the Department of Criminal Justice Information Services (DCJIS) and MGL c. 6, §172, and only after a CORI Acknowledgement Form has been completed. All applicants will be notified that a CORI check will be conducted. If requested, the applicant will be provided with a copy of the CORI policy.
3. An informed review of a criminal record requires adequate training. Accordingly, all personnel authorized to review CORI in the decision-making process will be thoroughly familiar with the educational materials made available by the DCJIS.
4. Prior to initiating a CORI check, the City will review the qualifications of the applicant to determine if the applicant is otherwise qualified for the relevant position. The City will not conduct a CORI check on an applicant that is not otherwise qualified for the relevant position.
5. Unless otherwise provided by law, a criminal record will not automatically disqualify an applicant. Rather, determination of suitability based on CORI checks will be made consistent with this policy and any applicable law or regulations.
6. If a criminal record is received from DCJIS, the authorized individual will closely compare the record provided by DCJIS with the information on the CORI request form and any other identifying information provided by the applicant, to ensure the record relates to the applicant.
7. If, in receiving a CORI report, the City receives information it is not authorized to receive (e.g. cases with dispositions such as not guilty or dismissal, in circumstances where the City is only authorized to receive convictions or case-pending information), the City will inform the applicant and provide the applicant with a copy of the report and a copy of DCJIS' *Information Concerning the Process for Correcting a Criminal Record* so that the applicant may pursue correction with the DCJIS.
8. If the City of Cambridge is planning to make an adverse decision based on the results of the CORI check, the applicant will be notified immediately. The applicant shall be provided with a copy of the criminal record and the City's CORI policy, advised of the part(s) of the record that make the individual unsuitable for the position and given an opportunity to dispute the accuracy and relevance of the CORI record.
9. Applicants challenging the accuracy of the criminal record shall be provided a copy of DCJIS *Information Concerning the Process for Correcting a Criminal Record*. If the CORI record provided does not exactly match the identification information provided by the applicant, the City of Cambridge will make a determination based on a comparison of the CORI record and documents provided by the applicant. The City of Cambridge may contact DCJIS and request a detailed search consistent with DCJIS policy.
10. If the City of Cambridge reasonably believes the record belongs to the applicant and is accurate, then the determination of suitability for the position will be made. Unless otherwise provided by law, factors considered in determining suitability may include, but not be limited to the following:
  - (a) Relevance of the crime to the position sought;
  - (b) The nature of the work to be performed;
  - (c) Time since the conviction;
  - (d) Age of the candidate at the time of offense;

- (f) The number of offenses;
- (g) Whether the applicant has pending charges;
- (h) Any relevant evidence of rehabilitation or lack thereof;

11. The Personnel Department will assist affected departments, in assessing the suitability of candidates in accordance with paragraph 10 a through i above, to ensure consistency, fairness, and protection of employment opportunities and the public interest.
12. The City of Cambridge will notify the applicant of the decision and the basis of the decision in a timely manner.
